

Phase	Focus
P1: Programming Foundations	Programming Foundations is all about the fundamentals. It covers things like learning how to use the terminal, basic coding concepts, and how to test code. Here you'll develop foundational skills enabling you to begin taking on more advanced topics.
P2: Intermediate Web Development	Intermediate Web Development delves deeper into foundational topics introduced in Programming Foundations, while also introducing new material like how to create static HTML and CSS pages, build HTTP servers, and use the latest version of JavaScript to write asynchronous code. To start Phase 2, you must pass the Phase 2 interview.
P3: Integrated Practice	Integrated Practice gives learners a chance to synthesize and utilize skills developed in phases 1 & 2 in module lessons and small projects that mimic real world applications and require more creative problem solving. To start Phase 3, you must pass the Phase 3 interview.
P4: Apprenticeship	In the Apprenticeship phase, SEPs and learners will collaborate on contributions to OSS projects and possibly on live, production systems like the LOS apps (echo, idm, etc.). SEPs will select projects and work with learners to identify appropriate issues to work on, and learners will be expected to submit pull requests to project maintainers. To start Phase 4, you must pass the Phase 4 interview.
P5: Career Prep	Career prep supports learners with technical interview preparation, resume and online presence development, networking skills, and overall accountability support during the job search process.
